March 23, 2017

## Locating the Files

The two zip files (`MakeVisitorUsingR3.zip` and `UndoVisitorUsingR3.zip`) containing the edited eclipse projects can be found in the `filippone-bell` directory.

Each project zip has a PDF file containing an explanation of the R3 script contained in the project. These PDFs are called `MakeExplanation.pdf` and `UndoExplanation.pdf` respectively.

## Issues With R3

On MacOS, I had to run the R3 version of Eclipse from the command line. This involved navigating into the `Eclipse.app` application and running the executable binary with `./eclipse`.

The given version of R3, although limited, was clearly explained in documentation. The workflow took some getting used to and is currently not easy to use. Better integration with eclipse or complete separation from eclipse would be helpful in improving the workflow.
